

TABLE ONE: Evaluation of Preoperative Health Status Prior to AMOS**

ASA Category	Preoperative Health Status	Organ System Status	AMOS Protocol
ASA I	Normal healthy patient	All organ systems intact.	IDEAL
ASA II	Patient with mild systemic disease	No functional limitations. Has well-controlled disease of one body system. Controlled hypertension or diabetes without systemic effects, cigarette smoking without chronic obstructive pulmonary disease, mild obesity, pregnancy. Update medical history and cross-check for medication interactions.	INDICATED
ASA III	Patient with severe systemic disease	Some functional limitation. Has controlled disease of more than one body system or major organ. No immediate danger of death. Controlled congestive heart failure, stable angina, previous heart attack, poorly controlled hypertension, morbid obesity, chronic renal failure, bronchospastic disease with intermittent symptoms. Strongly encourage physician consult.	INDICATED WITH PRECAUTIONS
ASA IV	Patient with severe systemic disease that is a constant threat to life	Has at least one severe disease that is poorly controlled or at end stage. Possible risk of death. Unstable angina, symptomatic COPD, symptomatic CHF, hepatorenal failure. Obtain physician consult and review current laboratory values.	CONTRA-INDICATED (RELATIVE)
ASA V	Patient not expected to survive > 24 hours without surgical intervention	Multi-organ failure. Hypothermia, poorly controlled coagulopathy.	CONTRA-INDICATED
ASA VI	Patient declared brain-dead	Organs are being removed for donor purposes.
